Introduction

We live today in a world of drugs. Drugs for pain, drugs for disease, drugs for allergies, drugs for pleasure, and drugs for mental health. Drugs that have been rationally designed; drugs that have been synthesized in the factory or purified from nature. Drugs fermented and drugs engineered. Drugs that have been clinically tested. Effective. Safe.

*"We live today in a world of **drugs**.* Drugs for **pain**, drugs for **disease**, drugs for **allergies**, drugs for **pleasure**, and drugs for **mental health**. Drugs that have been **rationally designed**; drugs that **have been synthesized** or **purified from nature**. Drugs **fermented** and drugs **engineered**. Drugs that have been clinically tested. Effective. Safe."

The drug discovery process...

- *Science* **2000**, 287, 1951 (J.Uppenbrink, J.Mervis)

Science **2004**, 303, 1713 (Donald Kennedy Ed)

What makes a successful research team?

GROUP THEORY

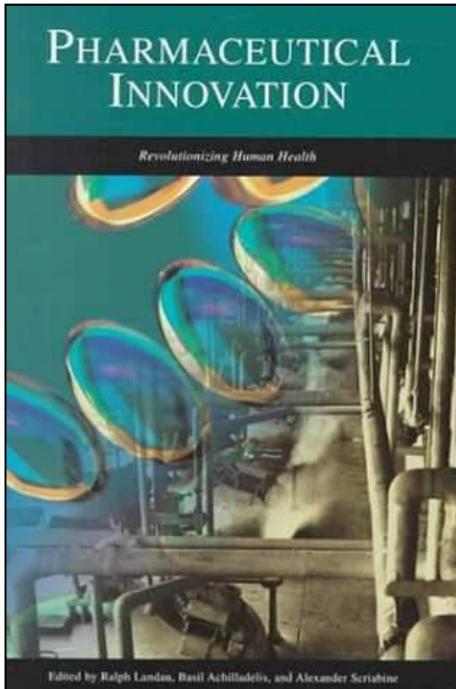

Interdisciplinarity

J. Whitfield, *Nature* 2008, 455, 720

“A good scientist is someone who succeeds in getting the various scientific disciplines to work together harmoniously just as the fingers of a hand can function properly only if they work in concert.” P. Janssen

The Pharmaceutical Innovation

Technological innovation is a dynamic process perhaps the most dynamic of all industrial activities;

The dynamism of technological innovation also dependent of the interaction of Science & Technology;

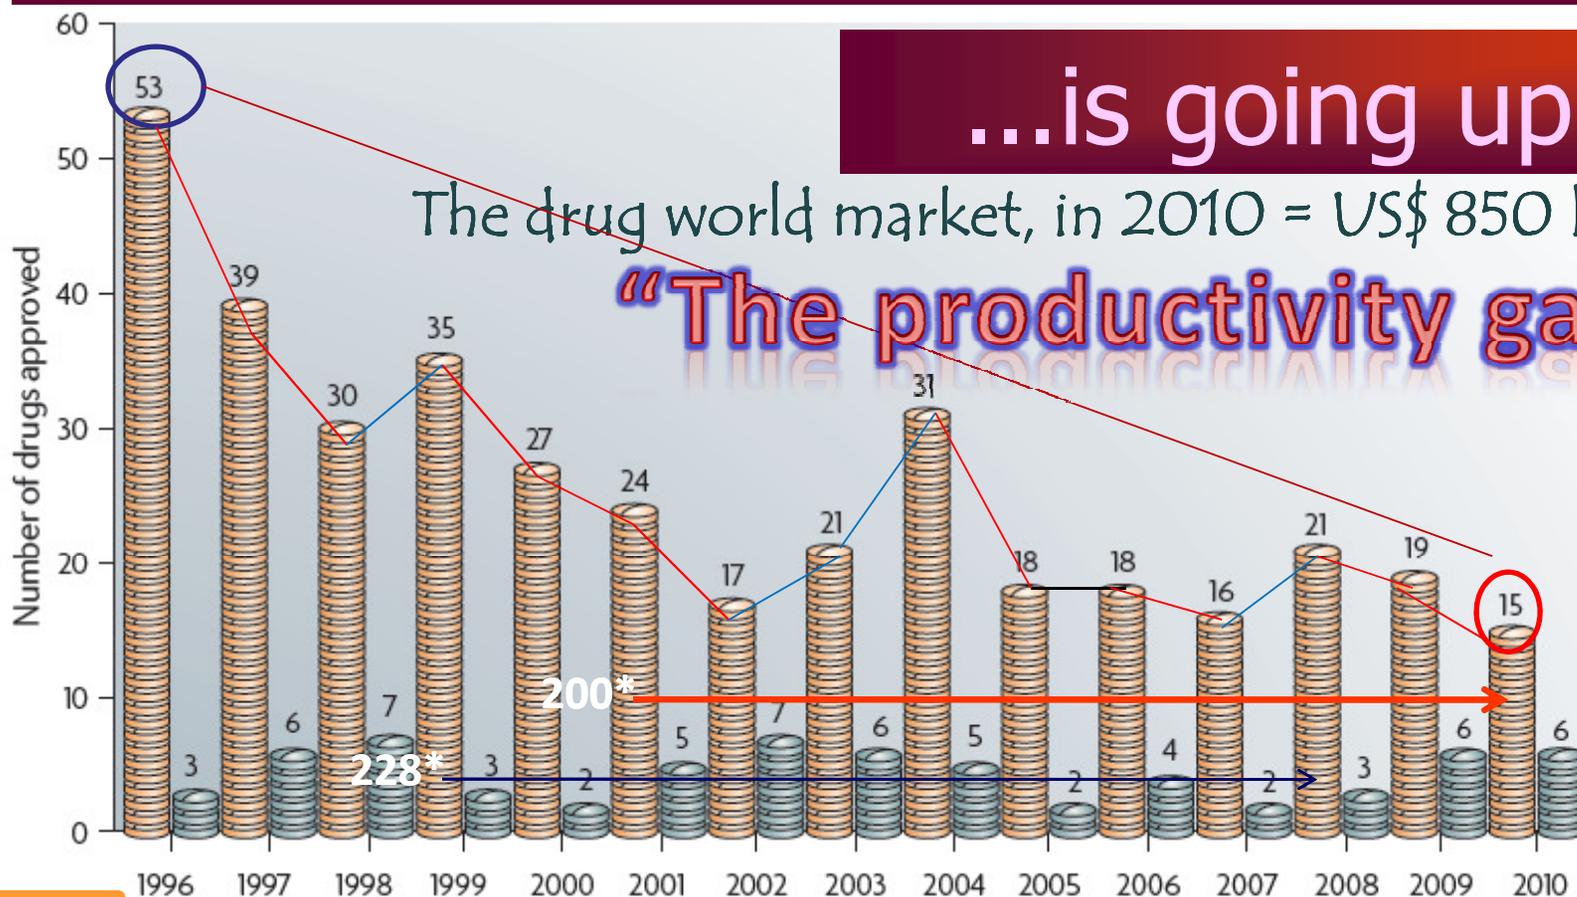

The technological innovation is the principal driving-force of pharmaceutical industry;

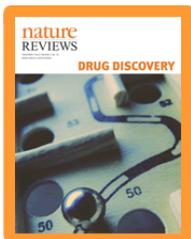

The Big Pharma innovation crisis...

...is going up !

The drug world market, in 2010 = US\$ 850 bi

“The productivity gap”

* A. Mullard, 2010 FDA drug approvals, *Nature Rev. Drug Discov.* **2011**, *10*, 82.

“In the 10-year period between 1999 and 2008, the FDA approved 183 small-molecule drugs...”,

D Swinney & J Anthony, *Nature Rev. Drug Discov.* **2011**, *10*, 507.

The pharmaceutical industry invest *ca.* 10-15% year in R&D

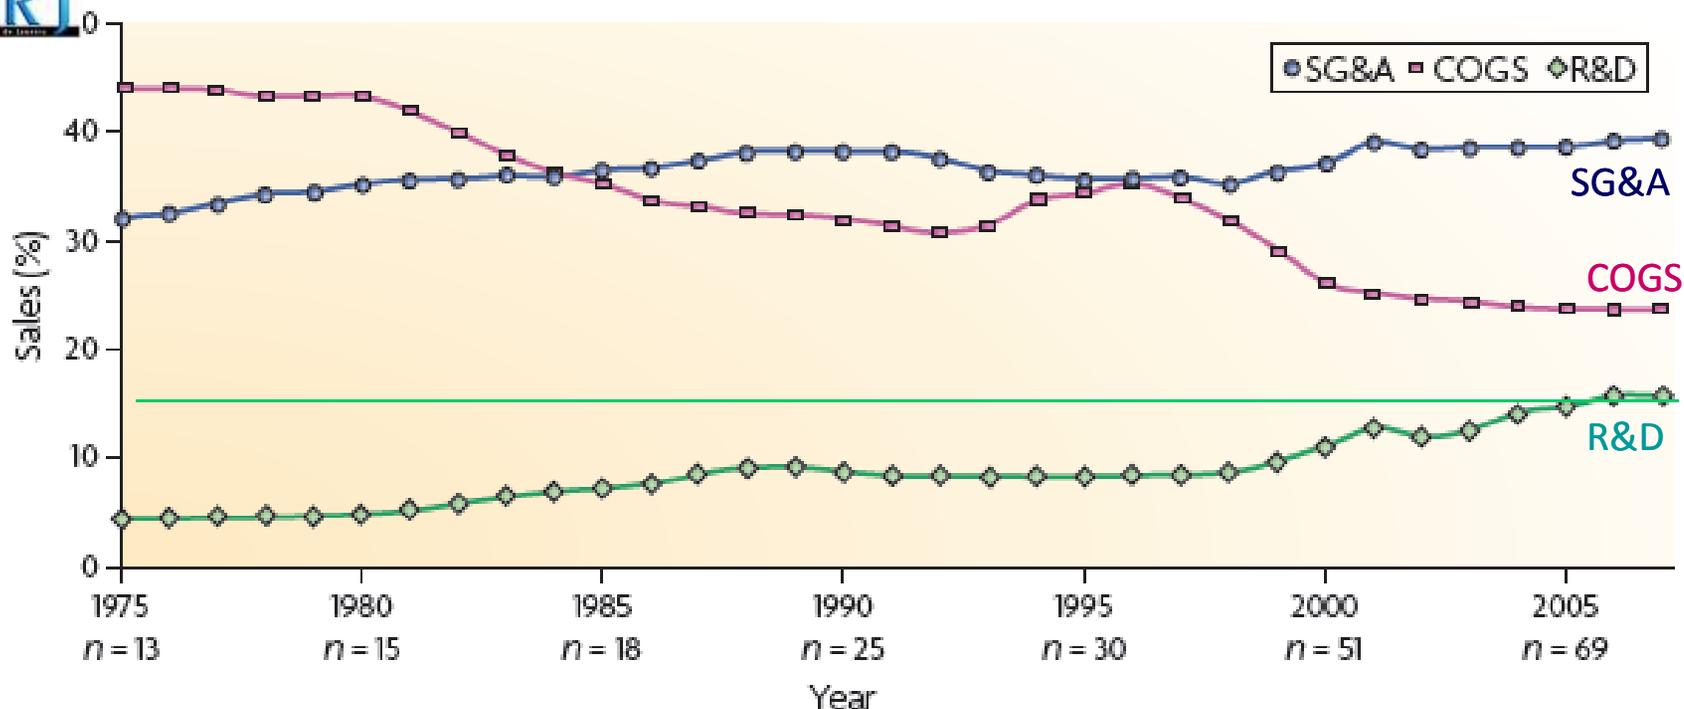

Figure 1 | Trends in resource allocation to SG&A, R&D and COGS in the pharmaceutical industry: 1975–2007. The figure plots median percentage of sales (smoothed). Investment in SG&A (sales, general and administrative costs) is shown in blue circles, COGS (costs of goods sold) is shown in pink squares and R&D (research and development) is shown in green diamonds.

- R&D. Research and development expenditures include raw materials and professional services used in R&D projects, salaries of R&D personnel, depreciation of infrastructure and cost of utilities committed for R&D purposes. R&D expenditures do not include costs of knowledge or formulas acquired from other companies.
- SG&A. Sales, general and administrative expenditures include costs of sales, promotions, customer support and training, marketing, advertising campaigns, public relations, distribution, sponsorships, general corporate activities and compensation of senior executives.
- COGS. Costs of goods sold include manufacturing costs such as raw materials, subcontractors, salaries of production labour, depreciation of machines, production lines and infrastructures, utilities, maintenance costs and other manufacturing costs.

D Weiss, P Naik, R Weiss, The 'big pharma' dilemma: develop new drugs or promote existing ones?, *Nature Rev. Drug Discov.* **2009**, *8*, 533.

Creativity & innovativeness

zeitgeist or "spirit of the times"

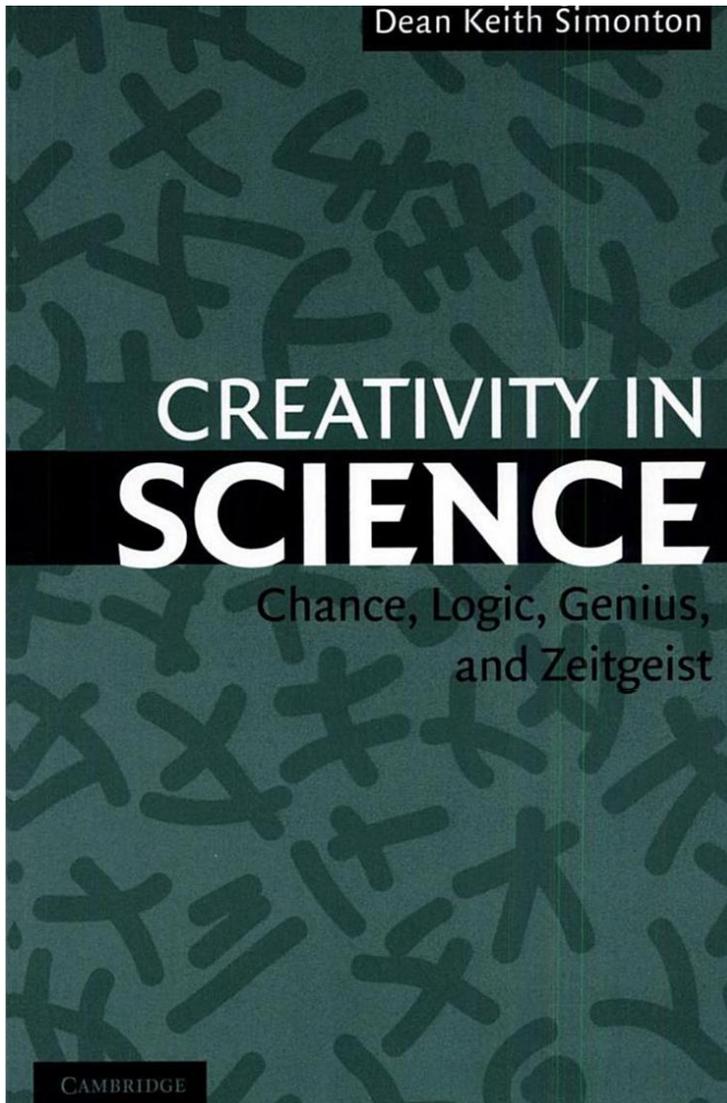

"discoveries and inventions become virtually inevitable (1) as prerequisite kinds of knowledge accumulate in man's cultural store; (2) as the attention of a sufficient number of investigators is focused on a problem – by emerging social needs, or by developments internal to the particular science, or by both"

Robert K. Merton (1961)

The role of genius in scientific advance. *New Scientist*, 12, 306-308

" without a dramatic improvement in R&D productivity, the pharmaceutical industry cannot sustain ... innovation ..."

D Swinney & J Anthony, How, were new medicines discovered?, *Nature Rev. Drug Discov.* 2011, 10, 507.

The Mission

- Organize the Brazilian scientific capacity in an effective drug discovery network;
- Support multi-institutional research projects in drug discovery & design;
- Contribute to Brazilian radical & incremental innovation in new & generic drugs;
- Studies in total synthesis of generic drugs & advanced synthetic intermediates and starting materials;
- Contribute to continuous high qualification of students in medicinal chemistry & pharmacology;

ANNUAL ACTIVITIES REPORT

www.inct-inofar.ccs.ufrj.br/download/aar/2010.pdf

INCT-INO FAR

Radical *In*novation

ADVANCED PROJECTS

1. *Development of new anti-asthmatic pharmaceutical prototypes (LASSBio-596).*
Prof. Patricia Rieken Macedo Rocco (UFRJ) -
Prof. Lidia Moreira Lima (UFRJ)
2. *Study of functionalized n-phenylpiperazine derivatives as prototypes for the development of new atypical antipsychotics.*
Prof. Stela Maris Kuze Rates (UFRGS)
3. *Study of the potential anti-inflammatory effect of the LASSBio 897 compound, on silicosis and asthma models.*
Prof. Patricia Machado Rodrigues e Silva (FIOCRUZ-RJ)
Prof. Marco Aurelio Martins (FIOCRUZ-RJ)

22%

INTERMEDIATE PROJECTS

1. *Benzaldehyde Semicarbazone (BS).*
Prof. Heloisa de Oliveira Beraldo (UFMG)
2. *Therapeutic potential of the new vasodilator compound (LASSBio 1289) in arterial and pulmonary hypertension.*
Prof. Gisele Zapata Sudo (UFRJ)
3. *Evaluation of antiparasitary activity of a series of semicarbazone and hydrazine-n-acylhydrazone derivatives.*
Prof. Magna Suzana Alexandre Moreira (UFAL)
4. *Prospection of Opportunities in New Generic and Innovative New Generic Medications.*
Prof. Adelaide Maria de Souza Antunes (INPI)
5. *Planning, synthesis and pharmacological evaluation of vectorized and self-organized neuroactive prototypes.*
Prof. Ricardo Menegatti (UFG)
6. *Planning, synthesis, structural characterization and pharmacological evaluation of new anti-inflammatory, anti-infective, and neuroactive pharmaceutical candidates.*
Prof. Claudio Viegas Junior (UNIFAL-MG)

43%

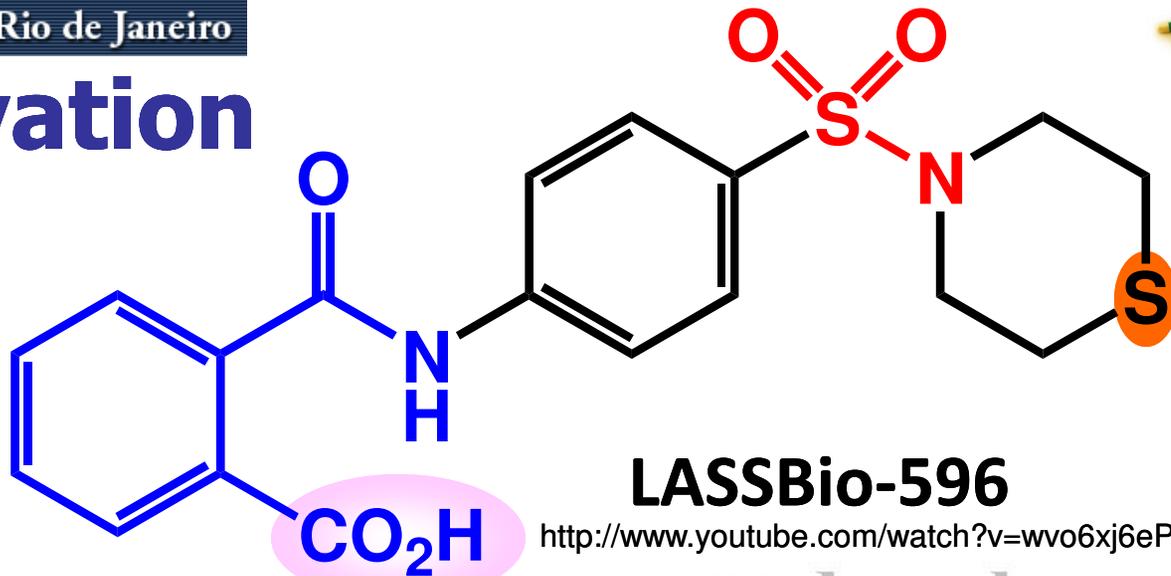

EARLY STAGE PROJECTS

1. *Theoretical Investigation of the Action Mechanism of Dialkylphosphorylhydrazones as Ribose 5-Phosphate Isomerase Enzyme Inhibitors of Trypanosoma cruzi and Plasmodium falciparum.*
Prof. Carlos Mauricio R. de Sant'Anna (UFRJ) -
2. *Evaluation of the antitumoral activity of new molecules planned structurally from the imatinib prototype.*
Prof. Patricia Dias Fernandes (UFRJ)
3. *Triage of new replication inhibitors for the acquired human immunodeficiency virus Type 1 (HIV-1) from the LASSBio Chemical Library.*
Prof. Luciana Jesus da Costa (UFRJ)
4. *Pharmacological evaluation of new neuroactive Zolpidem derivatives.*
Prof. Roberto Takashi Sudo (UFRJ)
5. *"In silico" prediction and "in vitro" production through bioconversion of human metabolites of pharmaceutical prototype candidates.*
Prof. Valeria de Oliveira (UFG)

REVIEWS

Drug discovery: new models for industry–academic partnerships

Reviews • POST SCREEN

Cathy J. Tralau-Stewart, Colin A. Wyatt, Dominique E. Kleyn and Alex Ayad

Drug Discovery Centre and Business Development, Imperial College London SW7 2AZ, UK

The re-focusing of pharmaceutical industry research away from early discovery activities is stimulating the development of novel models of drug discovery, notably involving academia as a ‘front end’. In this article the authors explore the drivers of change, the role of new entrants (universities with specialised core facilities) and novel partnership models.

PG Wyatt, The emerging academic drug-discovery sector. *Future Med. Chem.* **2009**, *1*, 1013; R Kneller, The importance of new companies for drug discovery: origins of a decade of new drugs. *Nature Rev. Drug Discov.* **2010**, *9*, 867; AJ Stevens *et al.*, The role of public-sector research in the discovery of drugs and vaccines. *N. Engl. J. Med.* **2011**, *364*, 535.

Pharmaceutical industry

- Is intensive in Sci-research activity (no in BR);
- The competition pattern depend on new products (not original in BR);
- High innovation activity, radical >> incremental (in BR is the opposite);
- *ca. 8-12% of chiffre d'affaires* in RD&I investments (no in BR);
- High active in IP (very poor in BR);
- High qualify (PhD's) mainpower (no in BR);
- High expenses in marketing (*ca. 14%*; more than this in BR).

Pôle de recherche interdisciplinaire pour le médicament

Parc d'Innovation d'Illkirch
Communauté Urbaine de Strasbourg

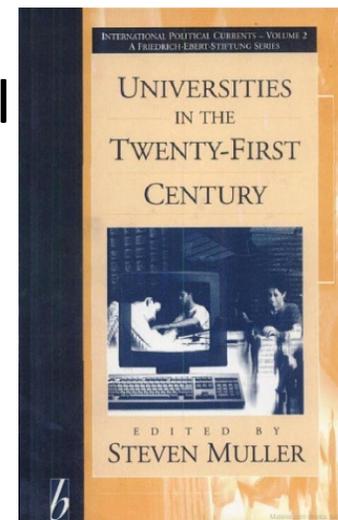

The effective and productive industry-university interaction in Brazilian pharmaceutical sector is poor, superficial and occasional.

University-Pharmaceutical industry partnerships in Brazil

• New drug discovery consortium (Rede de Conhecimento)

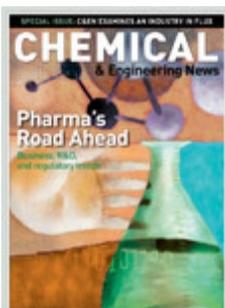

- A BR-based Consortium to discover & development novel drug candidates (lead-compounds), with BR Pharma industries, government financial agencies and selected DD research group from public universities;
- The virtual Consortium need to be manager by a multiple members committee (*e.g.* Uni / Ind / Gov);
- The Consortium needs experienced and dynamic Medicinal Chemistry research groups well articulate with Pharmacology research teams;
- The Consortium brings the core intellectual resource to:
 - (i) contribute to BR innovative cycle in DD as an effective international player;
 - (ii) develop high-tech DD start-up's in Brazil;
 - (iii) promote in partnership with industries the translation from a lead compound to a potential drug in clinical...

Final remarks

*“For all the **efforts to industrialize** and **automate discovery**, history suggests **drug discovery is art** as well as science **and relies heavily on the skill of experienced drug hunters...**”*
